

Illuminating Stairwell Signs

There have been several recent changes to the 2012 Life Safety Code that will add to the responsibilities of facility managers in maintaining LSC compliance.

One specific requirement is the change to stairwell identification signs for buildings over 3 stories.

According to the updated Life Safety Code* and NFPA standards, all stairwell signs will need the following:

- Illumination that meets ASTM E2072/E2073**
- Minimum size of 12" x 18"
- Tactile letters***
- Non-glare
- New formatting that includes specific language pertaining to floor numbers, roof access and EXIT discharge directions.
- Braille***

These new changes will render current stairwell signs non-compliant, and there will be no grandfathering of existing signs.

HIGHTECH GLOW is your one-stop shop for the new 2010 Life Safety Code compliant Stairwell signs. Additionally ask us about our wide range of other NFPA compliant non-electric, self-illumination safety and way-finding signage that never needs batteries, electricity, maintenance or testing.

HIGHTECH GLOW uses an Advanced Photoluminescent Technology.®
